About Me

A frontend engineer with a good grasp of algorithms and crucial engineering concepts. But also aspiring to get better in all ramifications. I have 4 years of experience working as a frontend engineer, both as a freelance and full-time employee. I'm committed to writing highly performant code with amazing styles and designs. I like standing up to challenges and I deliver in the best way possible.

Primary Skills

- React.JS
- Javascript
- Vue
- Redux
- Github

- Angular
- Gatsby
- Next.JS
- Git
- Graphql

Additional Skills

Typescript | Tailwind CSS | Firebase | Vercel | Netlify | Material-UI | Chakra-UI | Ant-Design | PHP | Node.JS | Express | Mysql | Mongo DB | PWA's | CI/CD | Wordpress | Agile | Flux

Work Experience

Frontend Developer

VDT Communications LTD | Dec 2017 - Present

Been working as a full-time frontend developer at VDT Communications. Some of my roles include;
building a web application strictly for SME clients, with Next.Js and Sass. The app was deployed to Vercel. This app simply allows SME clients to understand their packages, and contact the branch with ease. I also built and deployed a power report and attendance app with Gatsby, Redux, SASS and tailwind CSS. This app records employees attendance as well as individual POP power readings for the day.

Freelance Developer

NYSC | December 2020 - September 2021

During the course of my 1-year mandatory youth service, I redesigned and managed the Editorials CDS group's blog. I just basically added minor functionalities to it, one of which was the search functionality. Changed some styles and it was up and running again. The code was very really disorganized and going through it was a pain. But I didn't leave it that way instead I formatted it with VS code prettier extension. The work was executed using JavaScript and CSS

Freelance Developer

Fiverr | March 2017 - Present

I have 4 years of experience freelancing on Fiverr and I've been building websites for clients on Fiverr with React, Redux, Bootstrap, Sass, plain regular HTML, CSS, and vanilla JavaScript as well as PHP for backend with the Twig templating engine.

Frontend Developer

Torchgateway LTD | May 2018 - June 2021

Worked 3 years as a developer with Torchgateway LTD. During my time there I built and deployed several web applications one of which is Loanmedium. I Built the frontend of the Loanmedium web app with React, Redux, and SASS. Implemented charts on each user's dashboard using chartJS and fetched users information from an API endpoint then finally deployed the app to firebase.
